

Stromag Vector® Couplings

Stromag

Founded in 1932, Stromag has grown to become a globally recognized leader in the development and manufacture of innovative power transmission components for industrial drivetrain applications. Stromag engineers utilize the latest design technologies and materials to provide creative, energy-efficient solutions that meet their customer's most challenging requirements.

Stromag's extensive product range includes flexible couplings, disc brakes, limit switches, an array of hydraulically, pneumatically, and electrically actuated brakes, and a complete line of electric, hydraulic and pneumatic clutches.

Stromag engineered solutions improve drivetrain performance in a variety of key markets including energy, off-highway, metals, marine, transportation, printing, textiles, and material handling on applications such as wind turbines, conveyor systems, rolling mills, agriculture and construction machinery, municipal vehicles, forklifts, cranes, presses, deck winches, diesel engines, gensets and stage machinery.

Altra Industrial Motion

Altra is a leading global designer and manufacturer of quality power transmission and motion control products utilized on a wide variety of industrial drivetrain applications. Altra clutches and brakes, couplings, gearing and PT component product lines are marketed under the industries most well known manufacturing brands. Each brand is committed to the guiding principles of operational excellence, continuous improvement and customer satisfaction. Highly-engineered Altra solutions are sold in over 70 countries and utilized in a variety of major industrial markets, including food processing, material handling, packaging machinery, mining, energy, automotive, primary metals, turf and garden and many others.

Altra's leading brands include **Ameridrives**, **Bauer** Gear Motor, **Bibby** Turboflex, **Boston** Gear, **Delroyd** Worm Gear, **Formsprag** Clutch, **Guardian** Couplings, **Huco**, **Industrial** Clutch, **Inertia** Dynamics, **Kilian**, **Lamiflex** Couplings, **Marland** Clutch, **Matrix**, **Nuttall** Gear, **Stieber**, **Stromag**, **Svendborg** Brakes, **TB Wood's**, **Twiflex**, **Warner** Electric, **Warner** Linear and **Wichita** Clutch.

Evolution of the Established

- Easy installation
- Highly flexible, progressive characteristics
- Large shaft displacements in all directions

The new Stromag Vector® coupling represents the next logical and consistent step in the evolution of our tried and tested GE rubber fabric coupling – a flexible coupling that has become successfully established on the market.

The new Vector® coupling concept is based on the experience we have gained from the most diverse application fields.

The result is a coupling that connects two shafts free of backlash. The coupling features a radial arrangement of segments in a compact design.

This facilitates installation and removal without the need to displace the drive units.

The capability of the highly flexible Stromag Vector® coupling to displace in all directions makes it ideal for applications on engines mounted on both rigid and flexible bearings. The coupling also exhibits progressive characteristics for the optimal configuration of the drive unit's vibration behaviour.

Our Experts will support you by TVA torsional vibrations analysis for your drivetrain.

Stromag Vector® Couplings

What can the Stromag Vector® do for you?

It is very compact

because its rubber-fabric elements exhibit a high power density

It minimizes your

costs because the special rubber-fabric elements enhance the service life of the Vector® coupling

It saves valuable working

time because the elastomer elements radial mounting facilitates installation and removal without the need to displace the machine

It adjusts to your needs

because it can displace in all directions and can be installed easily on engines mounted on both rigid and flexible bearings

Add on features

compact design - outstanding ventilation - zero backlash - reduced installation times - low reactive forces

1) for transient repetitive vibrations during start / stop, clutching etc.

2) for rare occasional peak loads, e. g. short circuits in generators

3) Tolerances until $\pm 15\%$ related to the material are possible.

4) At torque T_{KN}

5) For: $T_w = 0.2 \cdot T_{KN}$; $f = 10 \text{ Hz}$; $\vartheta = 30^\circ\text{C}$

6) This value is constant for the torque range from 0 to $-0,3 \cdot T_{KN}$

7) At $n_{\max} = 600$ rpm, for higher speed ratings:

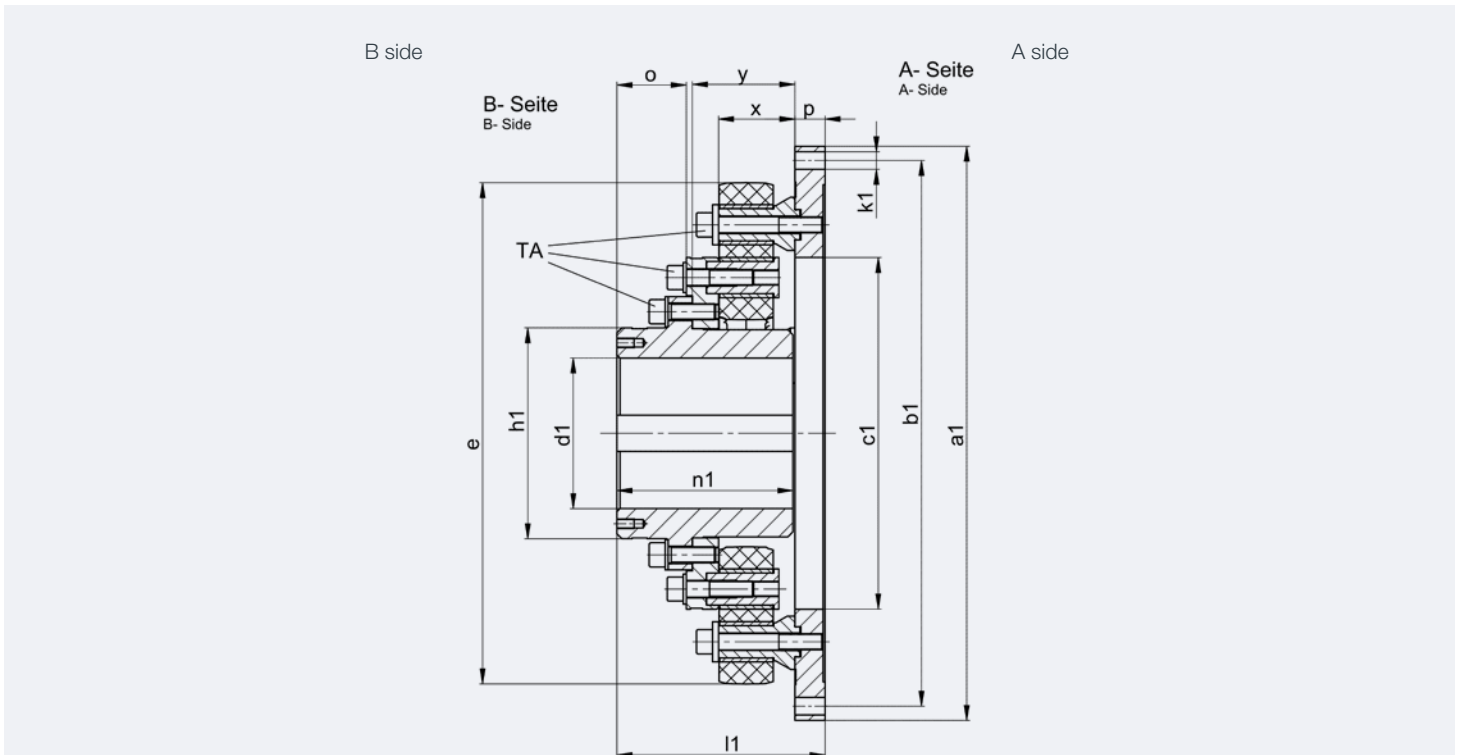

$$\Delta K_r(n) = \sqrt{\frac{600 \text{ min}^{-1}}{n}} \cdot \Delta K_r$$

8) The value $P_{KV, 60}$ describes the damping power to be absorbed over 60 minutes. Permanently absorbed damping power

$$P_{KV, \infty} = 0,5 \cdot P_{KV, 60}$$
